Gusts

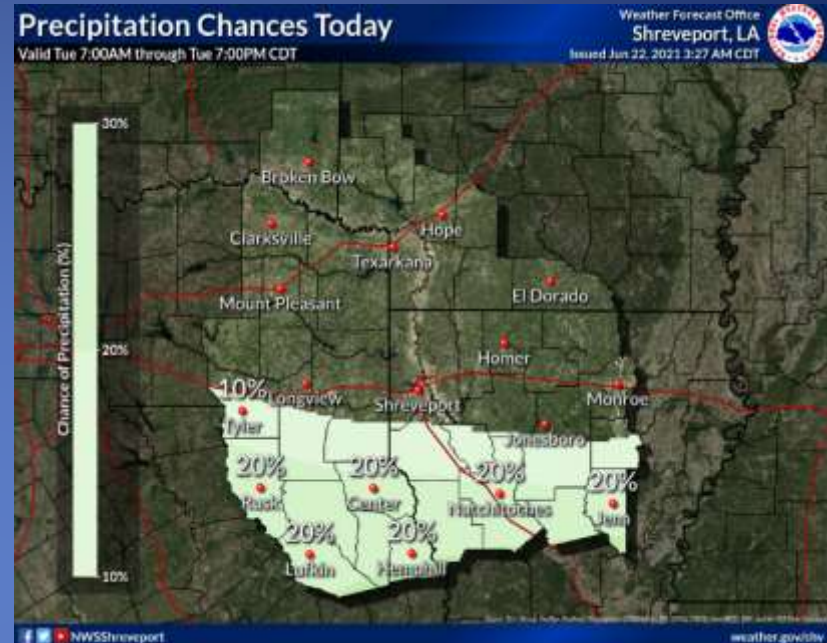

Hazardous Weather

Hazardous Weather

Watching for possible thunderstorms to move into the far northwestern Panhandles this afternoon where a storm could be severe. Damaging wind gusts will be the main threat.

Isolated showers and a few thunderstorms will remain possible this morning across portions of Lower East Texas and the southern sections of Northcentral Louisiana. Dry, warm, and slightly less humid conditions will return for the afternoon.

Hazardous Weather

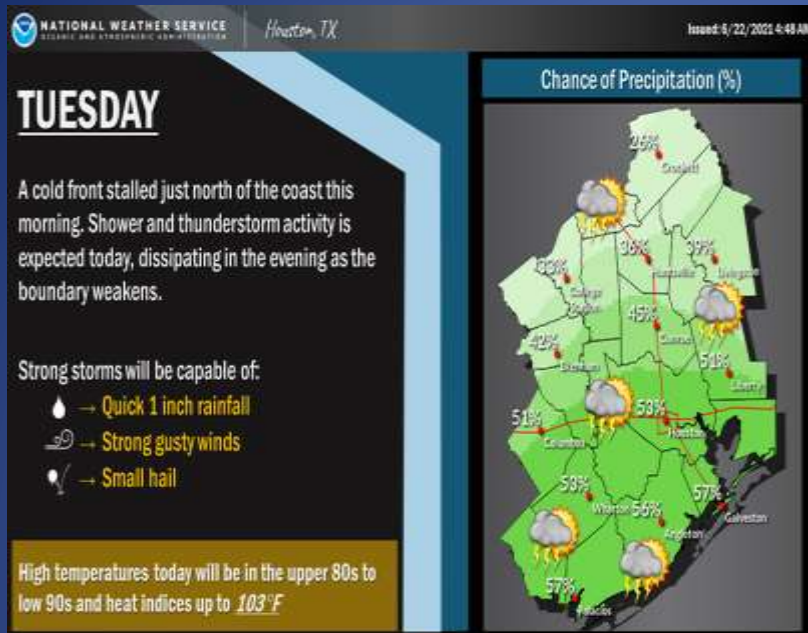

Warm with scattered to numerous showers and thunderstorms expected into the afternoon hours... mainly down along the coast. Southerly wind 10 mph becoming northeast, highs in the mid to upper 80s.

A mostly cloudy sky will not keep us from the 90s again this afternoon. Scattered showers and storms are possible later today to help cool some of us off. A moderate chop is forecast for the Laguna Madre along with slightly elevated seas on the Gulf waters.

Hazardous Weather

A cold front stalled just north of the coast will continue to enhance the development of showers and thunderstorms. Rain chances decrease this evening as the frontal boundary weakens.

In the wake of a late season cold front, it will be "cooler" today with high temperatures ranging from the mid 80s in the Hill Country and Central Texas to the mid 90s along the Rio Grande. As showers and thunderstorms end from north to south, cloudiness will decrease.

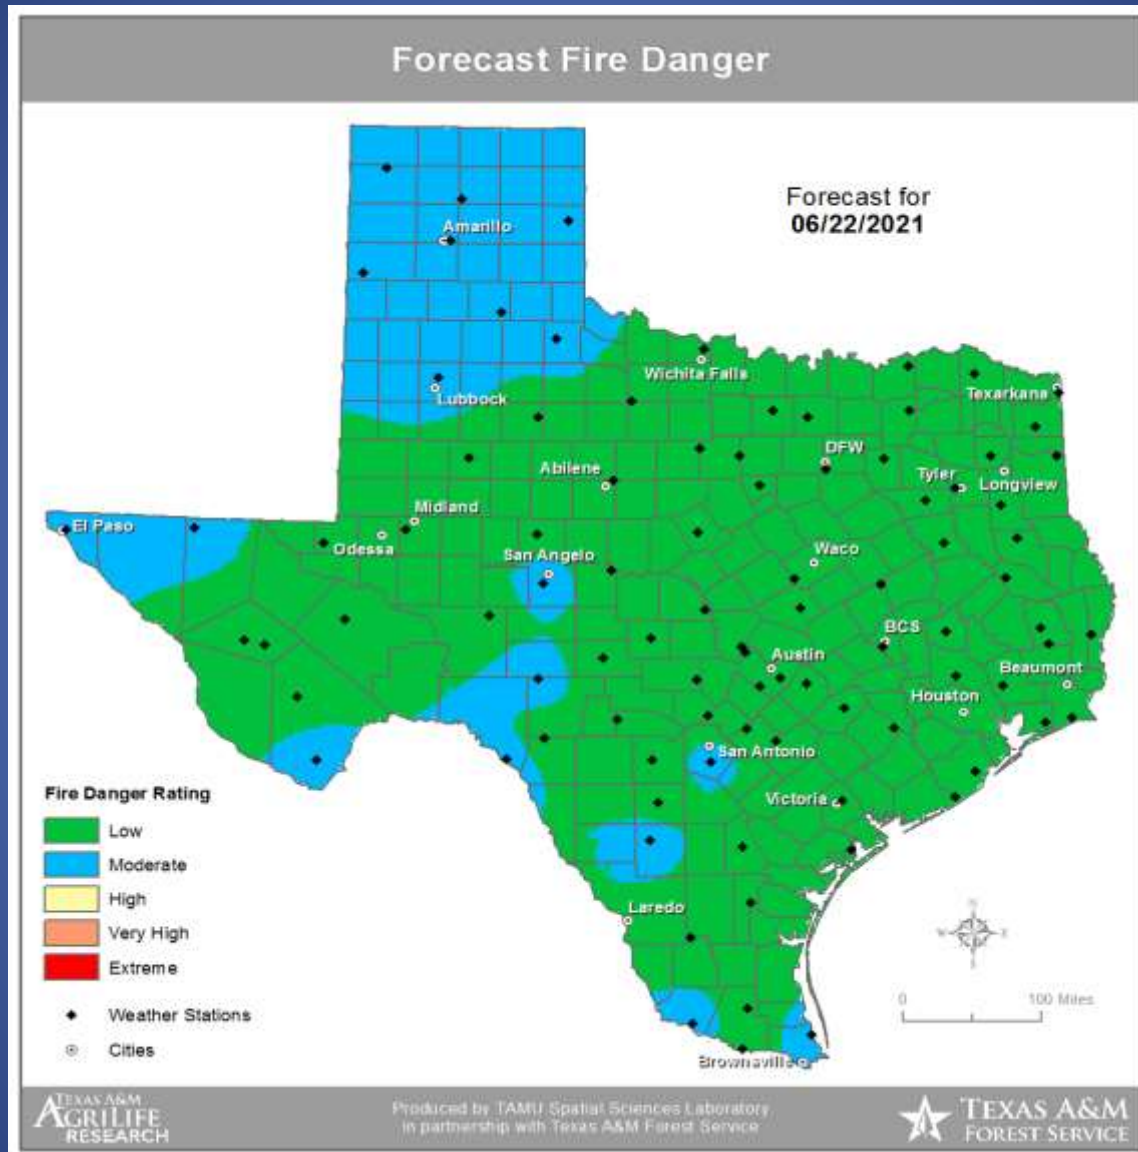

Weather Warnings/Advisories Issued

DATE	WARNING TYPE	LOCATION
